

Generic Role Map

Genesis Coherence Open v0.1 - Release Documentation

Purpose

This document defines the standard roles used in Genesis Coherence. It is generic by design and is not tied to one sector or pilot.

Standard Roles

Sponsor: Authorizes the work, confirms the business or institutional need, and removes blockers when needed.

Task Owner: Responsible for completing the task, keeping records current, and making sure the work follows the agreed rules.

Reviewer: Checks the output for quality, completeness, and fitness for purpose before approval.

Approver: Gives the formal sign-off for release, submission, publication, or operational use.

Admin / Coordinator: Maintains the workflow, tracks status, stores records, and ensures the right people are involved at the right points.

Legal / Data Reviewer (optional): Used only when the work involves legal, privacy, data protection, confidentiality, or policy risk that requires specialist review.

Basic Role Rules

- Every governed task should have one Task Owner.
- Every governed task should have one Approver.
- Review and approval should not be merged unless the activity is low risk and this is explicitly accepted.
- The Sponsor does not need to be involved in every task.
- The Legal / Data Reviewer is used only when needed.
- The Admin / Coordinator may support many tasks but should not become the default decision-maker.

Minimum Assignment Pattern

Role	Default expectation
Sponsor	Optional at task level
Task Owner	Required
Reviewer	Recommended
Approver	Required
Admin / Coordinator	Recommended
Legal / Data Reviewer	Conditional
